Calibo Out-of-the-Box - Whitepaper

the prospect's current situation:

- feeling like being behind in the industry
- no cloud technology expertise in-house
- you know you have to go CLOUD but don't know where to start
- Covid has shown the gaps that you have in your tech stack —> blocking effective remote working
- valuable data still trapped inside of legacy systems
- limited interaction with the business
- business is asking for faster delivery of business apps
- 4 product features
- 2 deployment options

imagine:

- a world where people with limited technical background can navigate the cloud efficiently
- a world where you don't have to handle many different vendors, but instead only receive one monthly bill that's covering all your cloud needs
- a world in which you can efficiently release new business applications that actually meet the needs of the business
- a world where business and IT can collaborate smoothly to ensure the companies success in a digital, data and AI-driven future

Enter Calibo:

As businesses are going digital, enterprises are relying on technology to deliver business solutions faster in order to drive business efficiencies and stay competitive. However, the scale, complexities, and disjointed way of creating digital products and driving initiatives pose a great challenge for organizations to manage the end-to-end cycle, using traditional tools and processes.

Calibo's Self-Service Development Platform-as-a-Service (Paas) is a state-of-the-art platform that accelerates various stages of your product development lifecycle from ideation to productization. It truly unites the enterprise by bringing business and technology teams together to ideate, design, build, and deliver cutting-edge digital solutions and products, which ensure competitive advantage and business results

Calibo promises you an improved development experience with 40% productivity gains, 100%faster time to market, and 100% traceability throughout the idea-to-market journey of your digital products and business applications.

- Calibo integrates with over 150 cloud technologies from agile planning tools to documentation tools and from cloud data platforms to machine learning and ai tools, from programming languages to source code repositories and from ci/cd pipeline configuration tools to any cloud platforms for infrastructure provisioning
- thanks to these integrations, Calibo can provide customers without an existing cloud tech stack with a best-of-breed ecosystem of cloud technologies out-of-the-box
- Calibo simplifies
- the development process for all roles that are directly or indirectly involved with the development process by providing a single user interface to everyone while leveraging the benefits of all underlying technologies
- keep in mind that many companies that have built complex cloud technology ecosystems struggle with slow user onboarding processes, challenges of finding talent in the market due to very specific cloud tool experience requirements
- the procurement process since everything is out of the box coming from a single vendor which is Calibo

Benefits:
- shorter ramp-up time with cloud ecosystem
- faster time to market for first cloud-based business applications
- most efficient way to build your single source of truth enterprise data platform
- go with the best-of-breed technology stack right away, without wasting time on evaluating the wrong technologies
- easier to find talent and onboard users because they only have to learn to navigate one interface instead of 10+
